Education

The University of Alabama

B.S./M.S. in Computer Science. Minor: Philosophy. GPA: 4.0/4.0

Tuscaloosa, AL

May 2027

Experience

Everpure – Data Intelligence Team

Software Engineering Intern

Santa Clara, CA

May 2026 – Aug 2026

- Developed file-system intelligence tooling for Pure1 Copilot, enabling file-extension statistics, file categorization, workload analysis, growth-trend detection, and anomaly-oriented investigations across arrays, volumes, and file systems.
- Designed and implemented SQL/dbt models and curated DX Data Insights tables in Snowflake, including incremental and latest-state models for file-system statistics, extensions, and size distributions; validated results against source queries and production-style data.
- Productionized data-backed Copilot tooling, powered using the OpenAI API, while refining tool contracts, routing boundaries, scope handling, human-readable output, unit-conversion logic, and last-updated semantics.
- Built automated tests and evaluations for tool behavior using manual testing, Snowflake verification, and CI/CD checks; identified routing, aggregation, duplicate-row, and data-grounding issues while collaborating across Data Intelligence, DX, and Copilot engineering.

The University of Alabama – Geography Department

Software Development Researcher

Tuscaloosa, AL

April 2025 – October 2025

- Led restoration and compilation of deprecated FARSITE wildfire modeling software within a Linux-based WSL environment using C++.
- Documented build processes, dependencies, and known issues to support reproducibility and future development.
- Collaborated with interdisciplinary faculty to adapt and extend FARSITE for Web GIS integration using modern front-end tools and spatial data frameworks.

Projects

SocraticAI Chatbot

- Built a full-stack web application guiding users through Socratic questioning to explore ethical and philosophical reasoning.
- Implemented a React frontend for real-time chat and session management paired with a Node.js and Express backend integrating local LLMs through Ollama.
- Engineered a MongoDB database to store conversation history and thematic progression, enabling persistent, privacy-preserving offline AI reasoning.

Lisp Interpreter

- Implemented a recursive-descent interpreter supporting symbolic expressions, variable bindings, and arithmetic operations.
- Built parser and evaluation engine from scratch, demonstrating core concepts in language design, recursion, and memory management.

Personal Portfolio Website

- Designed and deployed a personal portfolio site using HTML, CSS, and JavaScript, hosted via GitHub Pages.

Skills & Interests

Technical: C++, C, JavaScript (Node.js, React), Python, SQL, Clojure, Lisp, CUDA; Git, dbt, Snowflake, MongoDB, Express, Ollama, Jira, CI/CD, OpenGL; Linux (Ubuntu, Kali), WSL, GIS Integration, Digital Forensics, Claude Code
